

Product Specification Relining Connection

Description

The Relining Connection from Sacpro is a specially developed connection fitting made of polypropylene (PP), designed for use in pipe relining and rehabilitation projects.

The product ensures a tight, stable, and long-term durable connection between a relined main pipe and lateral/service connections.

Its robust construction and high chemical resistance make it ideal for demanding environments within residential, commercial, industrial, and municipal wastewater systems.

Material

Polypropylene (PP)

Polypropylene is a durable and chemically resistant thermoplastic material with excellent properties for wastewater and drainage applications:

- High chemical resistance
- Excellent corrosion resistance
- Moisture resistant
- Lightweight
- High impact strength
- Long service life
- Recyclable material

The material is not affected by corrosion and performs reliably in aggressive wastewater environments.

The product does not contain any environmentally hazardous or hazardous materials.
